## Objective

Significantly contribute to building of a product or experience, by participating in such aspects of development as user experience design, programming and testing.

**I value working with smart, passionate and caring team more than compensation levels.**

## Skills

### Programming Languages

**C#, SQL, JavaScript, HTML, CSS + LessCSS, XML+XSLT, PowerShell 2.0.**

### Concepts

**OOP, SOLID, RDBMS, ORM, TDD, BDD.**

### Frameworks and Technologies

#### .NET

**Castle, NHibernate, ADO.NET, ASP.NET MVC and WebForms, Silverlight, WCF, LINQ, TPL, NUnit.**

#### Web

**HTML, JavaScript, jQuery, CSS + LessCSS, Knockout.js, Jasmine.**

#### RDBMS

**SQL Server 2005/2008, T-SQL, SQL Server Reporting Services.**

### Version Control Systems

**Mercurial, Perforce, Git, SourceSafe :(.**

## Tools

**Visual Studio 2008/2010, Resharper, Reflector, CruiseControl.NET, TeamCity, YouTrack.**

## Employment

### 1995 - present

**Software Engineer**, MetaCommunications Inc., Iowa City, IA

Designed and implemented common and client specific features for [Virtual Ticket](#) - company's main product.

#### Product Design

Communicated with customers and designed product or client-specific features based on customer requirements.

#### Implementation

Wrote front-ends and back-ends in JavaScript, using proprietary and well-known components (thousands LOC of JavaScript). Used Jasmine to test complex or important client-side and server-side

components.

Led design and development of company's web product line, in particular [Approval Manager](#) - a web based proofing tool

#### Product Design

Defined product roadmaps, product features, did UX design including wireframe prototypes and full UI and functional specs, managed multi-product releases.

#### Management

Led teams of 3-5 people. Made sure that they fulfill company expectation and company fulfills theirs. Provided technical and non-technical leadership, gave seminars, trainings, led code reviews.

#### Implementation

All aspects of implementation - designed layered API's, database schemas, implemented features (front-end and back-end) using TDD/BDD, wrote reports and database upgrade scripts. Implemented necessary read path SQL queries, write path SQL batch operations and optimized them (or database schema) for better performance.

Developed Ajax and plain front-ends using such JavaScript libraries as jQuery, Knockout.js and underscore.js, testing critical or complicated user interactions using Jasmine. Developed HTML and CSS based on UI specs. Created reusable controls (WebForms) or helpers (MVC/Razor) for common view functionality. Developed SQL Server Reporting Services reports.

Designed complex database schemas, wrote domain models, services, repositories (before LINQ days) using TDD/BDD (NUnit). Hand-wrote SQL for performance critical pieces. Implemented web services using WCF. Occasionally utilized UML and ER diagrams to communicate ideas to team members and other project stakeholders.

#### Infrastructure

Wrote or set up major infrastructure pieces - build system (MSBuild, psake, custom build system), CI servers (CCNet, TeamCity).

#### Testing

Performed manual, semi-manual & automated testing as was needed.

## Open-Source Work

My only widely used public project is a part of Boost testing framework responsible for running, collecting and displaying release and trunk test results for Boost - a set of free peer-reviewed portable C++ source libraries ( <http://www.boost.org/development/tests/release/developer/summary.html> ).

## Education

B.S. in Computer Science, Saint Petersburg Technical University.
